

Crop Recommendations - 2025-09-21

City: Assam

Farm Size: 10.0 Acre (10.00 acres)

Last Crop: rice

It's impossible to provide precise financial figures (Expected Revenue, Investment, Market Price) for agricultural yields in 2025 for a specific location like Assam without access to real-time market data and detailed local cost analyses. Market prices fluctuate wildly. The yield estimates are also approximations based on average yields and can vary significantly due to weather, soil conditions, and farming practices. The soil pH of 2 is extremely acidic and will require significant amendment. This response provides a *general* recommendation, and on-the-ground consultation with local agricultural experts is crucial before making any planting decisions.

Crop 1:

Name: Black Pepper (*Piper nigrum*) 🌶️

Reason: Pepper is a high-value cash crop adaptable to Assam's climate and can thrive even with poor soil, provided it's amended.

Expected Yield: 0.5 tons (This is a low estimate due to the poor soil; significant soil improvement is needed)

Water Requirements: 1500 mm/season (This is an approximation and can vary)

Current Market Price: ₹500/kg (This is an approximation and can vary significantly)

Expected Investment: ₹150,000 (This is a rough estimate and includes soil amendment costs)

Expected Revenue: ₹500,000 (This is a highly speculative estimate based on yield and price)

Expected Diseases/Pests: Foot rot, Phytophthora, Aphids

Preventive Measures: Implement integrated pest management strategies including soil amendment, proper drainage, and bio-pesticides.

Crop 2:

Name: Ginger (*Zingiber officinale*) 🌿

Reason: Ginger is a relatively drought-tolerant crop that can tolerate acidic soils (though amendment is still recommended) and is in demand in Assam.

Expected Yield: 10 tons (This is a moderate estimate, assuming soil improvement)

Water Requirements: 1000 mm/season (This is an approximation and can vary)

Current Market Price: ₹80/kg (This is an approximation and can vary significantly)

Expected Investment: ₹100,000 (This is a rough estimate and includes soil amendment costs)

Expected Revenue: ₹800,000 (This is a highly speculative estimate based on yield and price)

Expected Diseases/Pests: Soft rot,
